

BUSINESS PROCESS MANAGEMENT

Is your organisation constrained by problem processes?

Have previous improvement initiatives flattered to deceive in delivering lasting savings?

Creating value

Business process improvement is a perennial ambition for cost-conscious organisations. Quicker cycle times, greater efficiency and improved customer satisfaction are strong drivers to enhance existing working practices. BPM intersects business management and IT, combining process improvement and automation elements, with tools & techniques to optimise your business processes, supported by rapidly-advancing capabilities of BPM software.

LOC offer a coherent business-led approach to BPM that can deliver increased efficiency and enhance bottom-line cost-savings.

Our approach defines distinct phases to help unlock the potential of process re-design, improvement and streamlining initiatives and lay the foundation to exploit a truly transformational technology.

LOC provides the following...

Process Strategy Review

LOC consultants will work with you to understand your existing process-related programmes and to determine whether the long-term benefits of BPM is relevant and can be realised.

Delivery support

LOC deploys its experts in critical project roles such as the programme manager, BPM architect and test manager, all of whom follow the established LOC BPM best practice.

Process analysis and optimisation

LOC BPM specialists are deployed to with analyse, model and improve business processes using BPM modelling tools coupled with established techniques (e.g. LEAN, Six Sigma, TQM) to achieve sustainable long-term results.
